

Renewable Energy Initiative

SOLAR POWER PLANT

Location: Jhagadia Plant Site and Petiya Site, Gujarat

Updated: 2023

Overview

Since its inception, Eskay Iodine has been a forward-looking organisation with a strong emphasis on the environment. One of our earliest and now largest scale developments in the environmental space is solar-powered energy. From January 2023, Eskay Iodine will generate close to 2.5 mega-watts of solar energy, which will cover more than 100% of our total power requirement and consumption.

Mega Solar Power Project

This 4.66-megawatt facility, developed by Eskay Iodine Pvt. Ltd. and S Kant Healthcare Ltd., is the first of its kind, large-scale, renewable energy initiative of the SK Group. Commissioned in January 2023, this 14-acre project is a testament to SK's commitment towards environmental sustainability and lowering its carbon footprint.

On-site Pilot Project

Upon the commissioning of the manufacturing facility at Jhagadia in 2013, we installed a rooftop solar power project of 184 kilo-watts as a first step in the world of renewable energy. Over the last decade, this pilot project has generated between 15-20% of the company's total energy requirement and has set the path for larger renewable power projects that are being developed.
